                                                                                                                                                                                                                                                                                                                                                                                                            the polynucleotides (II) that encode them. (I) have cytostatic activity.

(I) and (II) can be used in gene therapy and vaccine production. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TGAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by crecifying mutations or deletions in a patient's genome that affect the activity of TGAPs by expressing inactive proteins or to supplement the predents own production of them. Additionally, (II) may be used to patients own production of them. Additionally, (II) may be used to complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and therefore which patients may be used of restorative therapy. (I) may therefore which patients may be in need of restorative therapy. (ICAPS) and be used as antigens in the production of antibodies against TCAPS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                694 TIMITPSPITITPSSPITITITPSSTITIPSPPTIMITPSPTITIPSPTITIM----TIL 1747

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and in assays to identify modulators of TCAP expression and activity.

Anti-(I) antibodies and antagonists may also be used to down regulate
TCAP expression and activity. The anti-(I) antibodies may also be used
as diagnostic agents for detecting the presence of TCAPs in samples
(e.g. by enzyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512
and AAM24494 to AAM24523 represent nucleotide and amino acid sequences
given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 KSSIKAFGTVTLPIAFNVGGTGSSTDLEDSKCFTAGTNTVTFNDGDKDISIDVEFEKSTV 178

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              271
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.w1po.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGITG-ABL30511), expressed DNA sequences (ABLIGITG-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         212 GTMGFSSSNGDVAIDCSNIHIGITKGLNDWNYPVSSESFSYTKTCTSNGIQIKYQNVPAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABB35124 to ABB37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life to S. epidermidis infection. W.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella poemoniach, Pseudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Carr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                775 TTTV-----TAPPGGTDTVIIYESMSSSKISTSSND--ITSIIPSFSRPHYVNSTTSD 825
                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176 ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABS7777-ABB72072). This pattent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PV-----YEEDDYDTGARE

The invention relates to human novel polynucleotides and associated polypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, mebhritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzhelmer's disease, parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis. The sequences are involved in chemoteactic or chemokinetic activity, regulation of haematopolesis, treatment of myeloid or lymphoid cell disorders and platelet disorders such as thrombocytopenia, regeneration of bone, cartillage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, incisions, ulcers, treatment of osteoporosis, osteoarthritis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiencies and disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   107

the inventious relates to numen novel polypnotleotides and associated colypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain tissue, and are useful for the treatment of central and peripheral comparations system diseases and neuropathies, such as Alzheimer's disease, parkinson's disease, Huntington's disease and amyotrophic lateral comervous system disease, Huntington's disease and amyotrophic lateral comparations. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid coll disorders and platelet disorders such as thrombocytopenia, cell disorders and platelet disorders such as thrombocytopenia, convertion of bone, cartilage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, incisions, ulcers, treatment of osteoporosis, osteoarthritis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut correportion or regeneration and treatment of lung or liver fungal confined inmunodeficiency (SCID), bacterial or fungal confined interpretation and treatment of myeasis and myasthenia creations, autoimmune disorders e.g. multiple sclerosis and myasthenia creations, autoimmune disorders sequences ABG66666-ABG66738 represent human coagulation disorders. Sequences ABG6666-ABG66738 represent human coagulation disorders. Sequences ABG6666-ABG66738 represent human coagulation disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         67;

lov-1($$58261), of the Caenorhabditis elegans LOV-1 protein

(see AAY95556), generated by genomic deletion of the PKD/channel

c domain of the lov-1 gene by PKT. LOV-1 is an orthologue of

the human polycystin-1 (PKD1) gene that is defective in human

c autosomal dominant polycystic kidney disease (PKD). The LOV-1

c protein is involved in chemosensory or mechanosensory signal

transduction in sensory neurons. It is required for 2 male

c sensory behaviours, 'response' of males to hermaphrodites, and

c sensory behaviours, 'response' of males to hermaphrodites, and

c sensory behaviours, 'response' of the proteins encoded by these genes, to

c stress mutant or wild-type LOV-1 or PKD-2 (see AAY95557) can be used

c so study the functions of the proteins encoded by these genes, to

c streen for other genes involved in PKD, to identify mutations

c streen for other genes involved in PKD, to identify mutations

c streen for other genes involved in PKD, to identify mutations

c streen for other genes involved in PKD, to identify mutations

c are identified and used in the assays. Hence, an animal model is

c provided that permits study of the etiology of PKD and provides a

tool to identify the genes involved in the disease pathway, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     c acid molecules from Caenorhabditis elegans useful for genic nematodes with altered mating behavior for es or regulatory factors involved in polycystic kidney

It is required for 2 male outs, response, of males to hermaphrodites, and the vulva. Nematodes such as C. elegans that to raylorype LOV-1 or RMC-2 (see AAY95557) can be used the vulva. Nematodes such as C. elegans that inctions of the proteins encoded by these genes, to expense involved in PKD, to identify mutations at disease, and to screen for drugs that affect PKD. It called by the action of the genes or gene products and used in the assays. Hence, an animal model is permits study of the etiology of PKD and provides a Ly the genes involved in the disease pathway, to under that may be used to treat or alter the disease essen its severity or ameliorate symptoms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                acid molecules from Caenorhabditis elegans useful for nic nematodes with altered mating behavior for or regulatory factors involved in polycystic kidney

s (MUCI1 and MUCI2) located on human or its portion is used in detecting truncation and expansion. In the genetical compositions and gene therapy enes are used for treating disease nt Mucin expression, altered properties ry processes involving Mucins like is, asthma, chronic bronchitis and s, inflammatory bowel disease and breast olypeptides are used for determining ition. The MUCI1 and MUCI2 polypeptides and and antibodies. The present sequence ptide.
j to mucin gene, useful for treating
colorectal, breast cancer, cystic

the polynucleotides (II) that encode them. (I) have eyeostatic activity.

(I) and (II) can be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protetin (TCAR) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the activity of TCAPs by expressing inactive proteins or to supplement the activity of TCAPs by expressing inactive proteins or to supplement the produce the TCAP proteins, by inserting the nucleic acids into a host cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therapy. (II) may be used as antigens in the production of antibodies against TCAPs and in assays to identify modulacros of TCAP expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TCAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPS in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512 and AAM2494 to AAM24523 represent nucleotide and amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes colon tumour associated proteins (I) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Colon tumor associated proteins and nucleic acids useful for prevention, diagnosis and treatment of colonic cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW06725 is the FLO1 protein derived from a partial gene sequence from Saccharomyces cerevisiae. The gene was named Ig-FLO1. The FLO1 protein is believed to be involved in yeast flocculation (aggregation). The DNA and protein are used in a method for determining whether or not a sample yeast has flocculating activity, i.e. to distinguish if a yeast is a flocculating or floating yeast.
                                                                                                                                                                protein, involved in flocculation, derived from S.cerevisiae
                                                                                                                                                                                  aggregation; floating; yeast; beer; Saccharomyces;

The flocculation protein is used in a method to immobilise enzymes to a microbial cell wall. The coding sequence (FLO 1) is used in the production of a recombinant polynucleotide which comprises a structural gene encoding a protein with catalytic activity and at least part of a gene encoding at least the C-terminus of a protein capable of anchoring in a eukaryotic or prokaryotic cell wall. The nachoring in a eukaryotic or prokaryotic cell wall. The anchoring fragment or protein is selected from alpha agglutinin, AGA 1, FLO 1, major cell wall protein of lower enkaryotes or a proteinase of lactic acid bacteria. The recombinant polynucleotide compressed rocomprises a sequence encoding a signal peptide to ensure secretion of the expressed product. The signal peptide is protein, alpha factor, alpha-agglutinin, invertase or inulinase, alpha-amylase of Bacillus or proteinases of lactic acid bacteria. The host microorganism can be used for performing enzymatic
